Setent No. 5916872
GENEMAL INFORMATION:
APPLICANT: Chang, Conway
APPLICANT: Gu, Leo
APPLICANT: Chen, Jie
TITLE OF INVENTION: CYCLIC PEPTIDES HAVING BROAD
TITLE OF INVENTION: SPECTRUM ANTIMICROBIAL ACTIVITY
Sequence 167, Application US/08685589A
Patent No. 5916872
GENERAL INFORMATION:
APPLICANT: Chang, Conway
APPLICANT: Chang, Leo
APPLICANT: Chen, Jie
TITLE OF INVENTION: SPECTRUM ANTIMICROBIAL ACTIVITY
NUMBER OF SEQUENCES: 222

US-08-646-590B-26

Sequence 26, Application US/08646590B

Patent No. 596283

GENERAL INFORMATION:
APPLICANT: Warren, Patrick V.
APPLICANT: Warnson, Ronald V.
TITLE OF INVENTION: TRANSAMINASES AND AMINOTRANSFERASES
NUMBER OF SEQUENCES: 42

CORRESPONDENCE ADDRESS:
ADDRESSEE: Fish-& Richardson, P.C.
STRRET: 4225 Executive Square, Suite 1400
CITY: La Jolla
STATE: CA
COUNTY: US
COMPUTER READABLE FORM:
MEDIUM TYPE: Diskette
COMPUTER: IBM Compatible
COMPUTER: IBM Compatible
COMPUTER: IBM Compatible
COMPUTER: OB-MAY-1996
CLASSIFICATION NUMBER: US/08/646,590B
FILING DATE: 08-MAY-1996
CLASSIFICATION NUMBER: PCT/US97/01094
FILING DATE: O9-FEB-1996
PRIOR APPLICATION DATA:
APPLICATION NUMBER: PCT/US97/01094
FILING DATE: 109-FEB-1996

        A; Description: Arabidopsis thaliana chromosome II BAC F12L6 genomic sequence.
A; Reference number: 214168
A; Accession: T00547
A; Status: translated from GB/EMBL/DDBJ
A; Molecule type: DNA
A; Residues: 1-328 <ROU>
A; Residues: 1-328 <ROU>
A; Cloudie type: DNA
A; Residues: 1-328 <ROU>
A; Cloudies: 1-328 <ROU>

J. Mol. Evol. 42:422-431(1996).
FUNCTION: PARTICIPATES IN VARIOUS REDOX REACTIONS THROUGH THE REVERSIBLE OXIDATION OF THE ACTIVE CENTER DITHIOL, TO A DISULFIDE. THE F FORM IS KNOWN TO ACTIVATE A NUMBER OF ENZYMES OF THE PHOTOSYMTHETIC CARBON CYCLE.
FUNCTION OF CHLOROPLAST.
SUBCELLULAR LOCATION: CHLOROPLAST.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TISSUE-Lear,

                                                                                                                                                                                                                                                                                                                                                                                           δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to the use of linear peptides, coupled to an active agent, to prepare a composition able the cross the blood-brain barrier for diagnosis or treatment of disorders localised in the central nervous system. The linear peptide preferably has the formula: (a) XI- XI6; WXBXXXXBBXXXXXXBSX, or (c) BXXXXXXXXXXXXXXXBSX, where: each of XI-XI6
                     This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the against to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents, fragments), anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive mechanism, so can deliver active agents to cytoplasm and nucleus, including crossing the blood-brain barrier.
                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cytostatic; neurodegenerative; antidepressant; analgesic; antimicrobial; blood-brain barrier; diagnostic; central nervous system; protegrin; Antennapedia; tachyplesin; peptide antibiotic; Alzheimer's disease; cancer; Parkinson's disease; depression; pain; meningitis.

cc are amino acids (aa), of which 6-10 of them are hydrophobic and X6 must be Trp; each B is aa containing a side chain that includes a basic group; can deach X is an aliphatic or aromatic aa. The linear peptide may be cretro forms of (a)-(c) containing D and/Or L-form aa, or a fragment containing at least 5, preferably at least 7 consecutive aa from (a)-(c) containing at least 5, preferably at least 7 consecutive aa from (a)-(c) containing at least 6, preferably at least 7 consecutive aa from (a)-(c) techyplesins, transportan, etc. of these several families have cytolytic techyplesins, transportan, etc. of these several families have cytolytic categories based on their structure: (j) peptides with alpha-helices, c. ceropins and maganins; (ii) peptides with disulphide bond-linked beta-sheets, e.g. protegrin, tachyplesins, defensins; (iii) peptides of the invention protesidues, e.g. protegrin, tachyplesins, defensins; (iii) peptides con protegrical and pads). The peptides of the invention categories defined above: (a)-peptides con the Antennapedia family peptides; (b)-peptides are based on the Antennapedia family peptides. (b)-peptides are based on tachyplesins. This sequence con the presents a synthetic linear peptide designed on peptide able to cross the BBB and is conjugated to a doxorubicin molecule by a succinate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Conjugates of the linear peptides and the active agent are particularly used to treat, prevent or diagnose brain cancer, Alzhelmer's or parkinson's diseases, depression, pain and meningitis, but also for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New composition useful for cancer treatment and prevention, contains anticancer agent and peptide vector that transports agent into cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The specification describes a pharmaceutical composition, which comprises at least one anticancer agent associated with at least on peptide that can transport it into cancer cells and which inhibits

                                                                             δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the disulphide bridge. The new derivatives are linear and lack the agents to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                          ö

development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, particularly the P-glycoprotein pump, are avoided. Also, peptides are easily produced by chemical synthesis, can be coupled easily to the agent, cross mammalian cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                          Gaps

Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the disulphide bridge. The novel derivatives are used to deliver active agents to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonacledides, ribozymes, antitumour agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive including crossing the blood-brain barrier.

The invention relates to the use of linear peptides, coupled to an active agent, to prepare a composition able the cross the blood-brain barrier of diagnosis or treatment of disorders localised in the central nervous for diagnosis or treatment of disorders localised in the central nervous constant. The linear peptide preferably has the formula: (a) XI-XI6 (b): BXXXXXXXBBXXXXXXXXXXBBXB, where: each of XI-XI6 (c): BXXXXXXXBBXB, where: each of XI-XI6 (c): BYXXXXXXBBXB, where: each of XI-XI6 (c): BYYB, each B: da containing a side chain that includes a basic group; and each X is an aliphatic or aromatic aa. The linear peptide may be containing at least 7 consecutive as from (a)-(c). The containing D- and/or L-form as, or a fragment containing at least 5, preferably at least 7 consecutive as from (a)-(c). Eachyplesins, transportan, etc. of these several families have cytolytic tachyplesins, transportan, etc. of these several families have cytolytic etgeories based on their structure: (i) peptides with alpha helices, categories based on their structure: (i) peptides with alpha helices, categories based on their structure: (i) peptides with alpha helices, categories, e.g. bactericins and PR19. The peptides of the presence of with no major structure but containing bends due to the presence of the number of are based on the Antennapedia family peptides; (b)-peptides are based on the Antennapedia family peptides; (b)-peptides are based on the BBB and (c)-peptide are based on tachyplesins. This sequence proteptins; and (c)-peptide are based on tachyplesins and propertide designed on peptides are based on the BBB and is conjugated to a doxorubicin molecule by a succinate the BBB and is conjugated to a doxorubicin molecule by a succinate the BBB and also on the branch of the peptide are based on tachyper of the peptide are based on tachyper by a perception of the branch of the base are based on the base are based on the base and also be linked to a benzylpenicillin molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Conjugates of the linear peptides and the active agent are particularly used to treat, prevent or diagnose brain cancer, Alzheimer's or parkinson's diseases, depression, pain and meningitis, but also for studying drug behaviour in BBB models.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Use of linear peptides as vectors for active ingredients, useful for diagnosis and treatment of central nervous system diseases, can transport agents passively across the blood-brain barrier
                                          _note= "linked to doxorubicin via a succinate (-CO-(CH2)2-CO-) linker; optionally linked to benzylpenicillin by a glycoamide linker"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     90.0%; Score 45; DB 21; Length 18; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the adsulphide bridge. The nevel derivatives are used to deliver active agents to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents, fragments and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive mechanism, so can deliver active agents to cytoplasm and nucleus, including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cytostatic; neurodegenerative; antidepressant; analgesic; antimicrobial; blood-brain barrier; diagnostic; central nervous system; protegrin; Antennapedia; tachyplesin; peptide antibiotic; Alzheimer's disease; cancer; Parkinson's disease; depression; pain; meningitis.

The invertion trained by the constitution able the cross the blood-brain barrier of diagnosis or treatment of disorders localised in the central nervous system. The linear peptide preferably has the formular (a) X1-X16; (b): BXXBXXXXXBBS or treatment of disorders localised in the central nervous system. The linear peptide preferably has the formular (a) X1-X16; are amino acids (aa), of which 6-10 of them are hydrophobic and X6 must be Trp; each B is an containing a side chain that includes a basic group; and each X is an aliphatic or aromatic aa. The linear peptide may be containing at least 7 consecutive aa from (a)-(c) containing D- and/or L-form aa, or a fragment containing at least 7 consecutive aa from (a)-(c). Peptides able to cross the BBB include protegrins, Antennapedia.

C retro forms of (a)-(c) containing D- and/or L-form aa, or a fragment containing at least 5, preferably at least 7 consecutive aa from (a)-(c). Peptides and are termed peptide antibiotics. They fall into 3 main categories per expense of the structure but containing bedies with disulphide bond-linked contained by a cercopins and maganins; (ii) peptides with disulphide bond-linked contained antibiotic attegories defined above: (a) peptides with no major structure but containing bends due to the presence of protegrins; and (c)-peptides are based on the Antennapedia family peptides; (b)-peptides are based on the Antennapedia family peptides; (b)-peptides are based on the Antennapedia family peptides; (b)-peptides are based on the RBB and is conjunated to a dalarrin molecule by a signibility of a dalarrin m
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to the use of linear peptides, coupled to an active

```
The specification describes a pharmaceutical composition, which comprises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the P-31ycoprotein pump, are avoided. Also, peptides are easily produced by chemical synthesis, can be coupled easily to the agent, cross mammalian cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   90.0%; Score 45; DB 21; Length 18; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                  The specification describes a pharmaceutical composition, which comprises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, particularly produced by chemical synthesis, can be coupled easily to the agent, produced by chemical synthesis, can be coupled easily to the agent, proceptors mammalian cell membranes rapidly by a passive mechanism (no cross mammalian cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antimicrobial protegrin; broad spectrum; gram-positive; bacterium; gram-negative; bacteria; yeast; fungus; fungi; protozoa; virus; gram-negative; hIV; human immunodeficiency virus; preservation; disinfection; prophylaxis; treatment; infection; disease; conjunctivitis; keratitis; corneal ulcer; stomach ulcer; STD; gram-negative sepsis; endocarditis; pneumonia; biocidal; biostatic; gram-negative sepsis; endocarditis; pneumonia; biocidal; biostatic; respiratory infection; urinary tract infection; MRSA; protozoan; vancomycin resistant Enterococcus; pathogen; multi-drug resistance; penicillin resistant Streptococcus pneumoniae; pig; porchne; methicillin resistant Staphylococcus aureus; systemic candidiasis.

The present sequence is an antimicrobial protegrin peptide, which has a broad spectrum of activity against microbial targets, containing pram-positive and gram-negative bacteria, yeast, fungl, including gram-positive and gram-negative bacteria, yeast, fungl, contour be used to preserve or disinfect a variety of materials, contact lens including medical equipment, foodstuffs, cosmetics, contact lens including medical equipment, foodstuffs, cosmetics, contact lens contains, medicaments or other nutrient containing materials. It solutions, medicaments or other nutrient containing materials. It can also be used for the prophylaxis or treatment of microbial contained by containing materials. It keratitis, corneal ulcers, stomed, ulcers associated with keratitis, corneal ulcers, stomed, ulcers associated with the lifections, sexually transmitted diseases, gram-negative sepsis, endocarditis, pneumonia and other respiratory infections, sepsis, endocarditis, pneumonia and other respiratory infections, critis biostatic or biocidal against clinically relevant pathogens this biostatic or biocidal against clinically relevant pathogens chibiting multi-drug resistance, e.g. vancomycin resistant exhibiting multi-drug resistance, e.g. vancomycin resistant staphylococcus streptococcus pneumoniae and methicillin resistant staphylococcus cure work (MRSA). It is given at a dosage of 0.1 to 5, preferably 0.5 ct 1 mg/Kg/day, by injection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

It can be used to preserve or disinfect a variety of materials, including medical equipment, foodstuffs, cosmetics, contact lens solutions, medicaments or other nutrient containing materials. It can also be used for the prophylaxis or treatment of microbial infections or diseases in plants and animals, e.g. conjunctivitis, keratitis, corneal uleres, stomach uleres associated with telicobacter pylori, sexually transmitted diseases, gram-negative sepsis, endocarditis, pneumonia and other respiratory infections, urinary tract infections, systemic candidiasis and oral mucositis. It is biostatic or biocidal against clinically relevant pathogens extincting multi-drug resistance, e.g. vancomycin resistant certains and methicillin resistant Staphylococcus cureus (MRSA). It is given at a dosage of 0.1 to 5, preferably 0.5 creptoroccus methods and methicillin resistant Staphylococcus con microbial management and methicillin resistant staphylococcus contains and methicillin resistant staphylococ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                               respiratory infection; urinary tract infection; MRSA; protozoan; vancomycin resistant Enterococcus; pathogen; multi-drug resistance; pentoillin resistant Streptococcus pneumoniae; pig; porcine; methicillin resistant Staphylococcus aureus; systemic candidiasis.
gram-negative sepsis; endocarditis; pneumonia; biocidal; biostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antimicrobial protegrin peptide(s) - having activity against
bacteria, yeast, fungi, protozoa and certain strains of viruses

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is an antimicrobial protegrin peptide, which has a broad spectrum of activity against microbial targets, including gram-positive and gram-negative bacteria, yeast, fungi, protozoa and certain strains of viruses and retroviruses, e.g. HIV.

Including medical equipment, foodstuffs, cosmetics, contact lens controlling medical equipment, foodstuffs, cosmetics, contact lens solutions, medicaments or other nutrient containing materials. It can also be used for the prophylaxis or treatment of microbial infections or diseases in plants and animals, e.g. conjunctivitis, keratitis, corneal ulcers, stomench ulcers associated with telicobacter pylori, sexually transmitted diseases, gram-negative sepsis, endocarditis, pneumonia and other respiratory infections, urinary tract infections, systemic candidiasis and oral mucositis. It is biostatic or biocidal against clinically relevant pathogens exhibiting multi-drug resistance, e.g. vancomycin resistant Enterococcus facculus, peniciallin resistant Staphylococcus aurens (MRSA). It is given at a dosage of 0.1 to 5, preferably 0.5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                         New peptides are disclosed which are designated "protegrins". The peptides are useful as antibacterial, antiviral and antifungal agents in peptides are local B amino acids in length both animals and plants. The peptides are 16-18 amino acids in length, and are characterised by four invariant cys residues at positions 6, 8, and 15 and either (1) by a characteristic pattern of basic and 13 and 15 and either (1) by a characteristic pattern of basic and prophobic amino acids and/or (2) being isolatable from animal (e.g. hydrophobic aminos of these peptides in which 1-4 of the portions) leukocytes; or analogues of these peptides in which 1-4 of the cys residues is/are replaced by hydrophobic or small amino acids. The peptides can be produced synthetically and some can be produced for the peptides can be modified by N-acylation and/or C-terminal amidation or esterification, and can be in linear or cystine-bridged form. D-Amino cid residues can be present.

The present sequence is a specific example of the protegrin The present sequence is a specific example of the protegrin produced by Ser.

The present sequence is a specifically claimed example of a peptide, crecombinantly produced, corresponding to the generic formula: recombinantly produced, corresponding to the generic formula: Al-A2-A4-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

CC A1-A2-A4-A4-A5-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16 (A17-A18)

CC As, A12 and A16 = a basic, hydrophobic, neutral/polar or small amino acid; A4 a a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar, acid or proline: A17 may be absent or a basic, neutral/polar, or small amino acid; and A18 may be absent or a basic, hydrophobic or small amino acid. This has a charge of neutral/polar, hydrophobic or small amino acid. This has a charge of contral/polar, hydrophobic or small amino acid. This has a charge of esterified forms, hydrophobic or small amino acid. This poptide or small amino acid. This poptide is in snake form where all the cysteine bridge. This poptide is in snake form where all the cysteine bridge. This poptide is in snake form where all the cysteine bridge. This poptide is in snake form where all the cysteine bridge or alanine in this case). Peptides of this formula are cysteine bridge and are useful as anti-bacterial, anti-viral and anti-tungal agents in plants and animals. The protegrins confer cresistance to microbia or viral infection in plants by preventing the resistance to microbia or viral infection in plants by micropanisms e.g. creatment of sexually transmitted disease caused by micropanisms e.g. candida albicans, HIV-1, Chlamydia trachomatis, Treponema pallidum and candida albicans, HIV-1, Chlamydia trachomatis, Treponema pallidum and Naisseria gonorrhoeae. They can also be used in eye care solutions and physiological conditions (e.g. in the presence of serum) than certain province of physiological conditions (e.g. in the presence of serum) than certain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

Frotegrin antiblotics form part of the peptide antiblotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the agents to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antibudura agents, fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents, and non-lytic but can cross mammalian cell membranes rapidly by a passive mechanism, so can deliver active agents to cytoplasm and nucleus, including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                             ö
                     This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the disulphide bridge. The novel derivatives are used to deliver active agents to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antibumur agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Linear; protegrin; peptide antibiotic; beta-sheet; secondary structure; disulphide bridge; antibody; ribozyme; antitumour agent; antiviral; anti-inflammatory; mammal; cell membrane; passive transport; cytoplasm; nucleus; blood-brain barrier.

By using the speptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, marticularly produced by chemical synthesis, can be coupled easily to the agent, produced by chemical synthesis, can be coupled easily to the agent, cross mammalian cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New composition useful for cancer treatment and prevention, contains anticancer agent and peptide vector that transports agent into cells

peptide antibiotics. Protegina antibiotics form part of the peptide antibiotics. Protegina antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the agents to an organism. e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents, antivities and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive mechanism, so can deliver acitive agents to cytoplasm and nucleus, including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cytostatic; neurodegenerative; antidepressant; analgesic; antimicrobial; blood-brain barrier; diagnostic; central nervous system; protegrin; Antennapedia; tachyplesin; peptide antibiotic; Alzheimer's disease; cancer; Parkinson's disease; depression; pain; meningitis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New peptides are disclosed which are designated "protegrins". The peptides are useful as antibacterial, antiviral and antifungal agents in beth animals and plants. The peptides are 16-18 amino acids in length and are characterised by four invariant Cys residues at positions 6, 8, 13 and 15 and either (1) by a characteristic pattern of basic and hydrophobic amino acids and/or (2) being isolatable from animal (e.g. pyrchobic amino acids and/or (2) being isolatable from animal (e.g. portine) leukocytes; or analogues of these peptides in which 1-4 of the Cys residues is/are replaced by hydrophobic or small amino acids. The cys residues can be produced synthetically and some can be produced recombinantly or can be isolated and purified from their native sources. The peptides can be modified by N-acylation and/or c-terminal amidation or resterification, and can be in linear or cystine-bridged form. D-Amino can be present sequence is a specific example of the protegrin analogues in which Cys(6, 8, 13, 15) have all been replaced by Ser.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The invention relates to the use of linear peptides, coupled to an active agent, to prepare a composition able the cross the blood-brain barrier for diagnosis or treatment of disorders localised in the central nervous for diagnosis or treatment of disorders localised in the central nervous cc for diagnosis or treatment of disorders localised in the central nervous cc system. The linear peptide preferably has the formula: (a) X1-X16 are amino acids (aa), of which 6-10 of them are hydrophobic and X6 must care amino acids (aa), of which 6-10 of them are hydrophobic and X1-X16 and each X is an aliphatic or aromatic aa. The linear peptide may be containing a least 5, preferably at least 7 consecutive as from (a)-(c) containing D- and/or L-form aa, or a fragment retro forms of (a)-(c) containing D- and/or L-form aa, or a fragment corresponds and each x is an aliphatic or aromatic active and are termed peptide antibiotics. They fall into 3 main effects and are termed peptide antibiotics. They fall into 3 main categories based on their structure: (i) peptides with alpha-helices, categories based on their structure: (i) peptides with alpha-helices, with no major structure but containing bends due to the presence of with no major structure but containing bends due to the presence of all into the peptide antibiotic categories defined above: (a)-peptides are based on the Antennapedia family peptides; (b)-peptides and co-peptide are based on tendention peptide estimated by a succlinate the BBB and is conjugated to a doxornbicin molecule by a succlinate the based on the antennapedia family peptide and a benzylpenicillin molecule by a a uncommidential and any or a procession or a peptide estimate and benzylpenic may also be linked to a benzylpenicillin molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         by a glycoamide linker. Conjugates of the linear peptides and the active agent are particularly used to treat, prevent or diagnose brain cancer, Alzheimer's or parkinson's diseases, depression, pain and meningitis, but also for studying drug behaviour in BBB models.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                          useful for
to benzylpenicillin by a glycoamide linker"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

The invention relates to the use of linear peptides, coupled to an active agent, to prepare a composition able the cross the blood-brain barrier for diagnosis or treatment of disorders localised in the central nervous for diagnosis or treatment of disorders localised in the central nervous composition are formed by the composition of the containing a side chain that includes a basic group; and each X is an aliphatic or aromatic as. The linear peptide may be containing of and/or Liform as, or a fragment retro forms of (a)-(c) containing D- and/or Liform as, or a fragment containing at least 7 consecutive as from (a)-(c). Containing D- and/or Liform as, or a fragment retro forms of (a)-(c) containing D- and/or Liform as, or a fragment containing at least 7 consecutive as from (a)-(c). Containing D- and/or Liform as, or a fragment cert of these several families have cytolytic tachyplesins, transportan, etc. Of these several families have cytolytic categories based on their structure: (i) peptides with alpha-helices, categories based on their structure: (i) peptides with alpha-helices, categories based on their structure: (i) peptides with alpha-helices, categories and magnins; (ii) peptides with disulphide bond-linked e.g. occropins and magnins; (ii) peptides with alpha-helices, categories e.g. bactericins and PR39. The peptides are based on the Antennapedia family peptides; (b)-peptides are based on the Antennapedia family peptides; (b)-peptides are based on tare based on the Antennapedia family peptides; (b)-peptides are based on tare based on the Antennapedia family peptides; (b)-peptides are based on the Antennapedia family peptides; (b)-peptides are based on the Antennapedia family peptides of the linear peptides and alpha conjugated to a dalargin molecule by a disulphide linker. The BBB and is conjugated to a dalargin molecule by a disulphide articularly cused to treat, prevent or diagnose brain 
analgesic; antimicrobial;

                                                                                                                                                                                                                                                                                                                                                                                    comprises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, particularly the P-glycoprotein pump, are avoided. Also, peptides are easily produced by chemical synthesis, can be coupled easily to the agent, cross mammalian cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                       New composition useful for cancer treatment and prevention, contains anticancer agent and peptide vector that transports agent into cells
                                                                                                                                                                                                                                                                                                                                                                              The specification describes a pharmaceutical composition, which
                                                                                                            Anticancer agent; cancer cell; resistance; P-glycoprotein pump;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           to treat cancer. The present sequence represents a probe linked to the anticancer agents of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    y Match 74.6%; Score 53; DB 21; Length 18;

```
This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the disulphide bridge. The nevel derivatives are used to deliver active agentis to an organism, e.g. therapeutic proteins, antibodies for their fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cytostatic; neurodegenerative; antidepressant; analgesic; antimicrobial;

The specification describes a pharmaceutical composition, which comprises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits. development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, particularly the P-glycoprotein pump, are avoided. Also, peptides are easily produced by chemical synthesis, can be coupled easily to the agent, produced by chemical synthesis, can be coupled easily to the agent, receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antimicrobial protegrin; broad spectrum; gram-positive; bacterium; gram-negative; bacteria; yeast; fungus; fungi; protozoa; virus; retrovirus; HIV; human immunodeficiency virus; preservation; dislanfection; prophylaxis; treatment; infection; disease; connectivitis; keratitis; corneal ulcer; stomach ulcer; STD; gram-negative sepsis; endocarditis; pneumonia; biocidal; biostatic; gram-negative sepsis; endocarditis; pneumonia; biocidal; biostatic; respiratory infection; urinary tract infection; MRSA; protozoan; vancomycin resistant Enterococcus; pathogen; multi-drug resistance; penicillin resistant Streptococcus pneumoniae; pig; porcine; methicillin resistant Staphylococcus aureus; systemic candidasis.
                                                                                                                                                                                                                                                                                        New composition useful for cancer treatment and prevention, contains anticancer agent and peptide vector that transports agent into cells

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Seguence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δλ
                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to the use of linear peptides, coupled to an active agent, to prepare a composition able the cross the blood-brain barrier for diagnosis or treatment of disorders localised in the central nervous (c for diagnosis or treatment of disorders localised in the central nervous cc for diagnosis or treatment of disorders localised in the central nervous (b); BXXBXXXBBXXXXBBXB, where: each of X1-X16 are amino acids (aa), of which 6-10 of them are hydrophobic and X must cc and each X is an allaphatic or aromatic aa. The linear peptide may be cc and each X is an allaphatic or aromatic aa. The linear peptide may be cretro forms of (a)-(c) containing a least 7 consecutive aa from (a)-(c). peptides able to cross the BBB include protegrins, Antennapedia, containing at least 7 consecutive aa from (a)-(c) containing at least 7 consecutive aa from (a)-(c) containing at least 7 consecutive and are termed peptide antibiotics. They fall into 3 main effects and are termed peptide antibiotics. They fall into 3 main effects and are termed peptide antibiotics. They fall into 3 main creased on their structure: (i) peptides with alpha-helices, e.g. cecrophins and maganins; (ii) peptides with disulphide bond-linked beta-sheets, e.g. bactericins and pR39. The peptides of the invention creased on the Antennapedia family peptides; (b)-peptides are based on creased on the Antennapedia family peptides; (b)-peptides are based on creased on the Antennapedia family peptides; (b)-peptides are based on the Antennapedia family peptides; (b)-peptides are based on the Mtennapedia family peptides are based on the BBB and is conjugated to a doxorubicin molecule by a succinate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

                                                                                                                                                                                                                                                                                                                               The present sequence is an antimicrobial protegrin peptide, which has a broad spectrum of activity against microbial targets, including gram-positive and gram-negative bacteria, yeast, fungi, including gram-positive and gram-negative bacteria, yeast, fungi, protozoa and certain strains of viruses and retroviruses, e.g. HIV.

It can be used to preserve or disinfect a variety of materials, including medicament, foodstuffs, cosmetics, contact lens solutions, medicament, foodstuffs, cosmetics, contact lens solutions, medicaments or other nutrient containing materials. It can also be used for the prophylaxis or treatment of microbial infections or diseases in plants and animals, e.g. conjunctivitis, keratitis, corneal ulores, stomach ulorers associated with Helicobacter pylori, sexually transmitted diseases, gram-negative sepsis, endocarditis, pneumonia and other respiratory infections, urinary tract infections, systemic candidiasis and oral mucositis. It is biostatic or biocidal against clinically relevant pathogens exhibiting multi-drug resistance, e.g. vancomycin resistant Staphylococcus cureus (MRSA). It is a dosage of 0.1 to 5, preferably 0.5 to 1 mg/kg/day, by injection.

The present sequence is an antimicrobial protegrin peptide, which has a broad spectrum of activity against microbial targets, including gram-positive and gram-negative bacteria, yeast, fungl, rolling gram-positive and gram-negative bacteria, yeast, fungl, protocoa and certain strains of viruses and retroviruses, e.g. HIV.

It can be used to preserve or disinfect a variety of materials, including medical equipment, foodstuffs, cosmetics, contact lens solutions, medicaments or orber nutrient containing materials. It can also be used for the prophylaxis or treatment of microbial infections or diseases in plants and animals, e.g. conjunctivitis, keratitis, corneal ulcers, stomach ulcers associated with Helicobacter pylori, sexually transmitted diseases, gram-negative sepsis, endocarditis, pneumonia and other respiratory infections, urinary tract infections, systemic candidiasis and oral mucositis. It is biostatic or biocidal against clinically relevant pathogens thereococcus faecium or faecalis, penicillin resistant Staphylococcus surens, MRSA, it is given at a dosage of 0.1 to 5, preferably 0.5 areas a brook of the contains of the contains and acted to 5, preferably 0.5 areas surens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Deprotozoa and certain strains of viruses and retroviruses, e.g. HIV.

It can be used to preserve or disinfect a variety of materials, including medicaments or other nutrient containing materials. It can also be used for the prophlaxis or treatment of microbial can also be used for the prophlaxis or treatment of microbial infections or diseases in plants and animals, e.g. conjunctivitis, infections or diseases in plants and orients associated with the choosecter pylori, sexually transmitted diseases, gram-negative Helicobacter pylori, sexually transmitted diseases, gram-negative sepsis, endocarditis, pneumonia and other respiratory infections, systemic candidiasis and oral mucositis. It is blostatic or biocidal against clinically relevant pathogens exhibiting multi-drug resistance, e.g. vancomycin resistant

Enterococcus faccium or faccilis, penicillin resistant staphylococcus currents (MRSA). It is given at a dosage of 0.1 to 5, preferably 0.5 to 1 mg/kg/day, by injection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
Helicobacter pylori; sexually transmitted disease; oral mucositis; gram-negative sepsis; endocarditis; pneumonia; biocidal; biostatic; respiratory infection; urinary tract infection. MRSA; protozoan; warocomycin resistant Enterococcus; pathogen; multi-drug resistance; penicillin resistant Streptococcus pneumoniae; pig; porcine; methicillin resistant Staphylococcus aureus; systemic candidiasis.

The present sequence is a specifically claimed example of a peptide, recombinantly produced, corresponding to the generic formula:

a recombinantly produced, corresponding to the generic formula:

c recombinantly produced, corresponding to the generic formula:

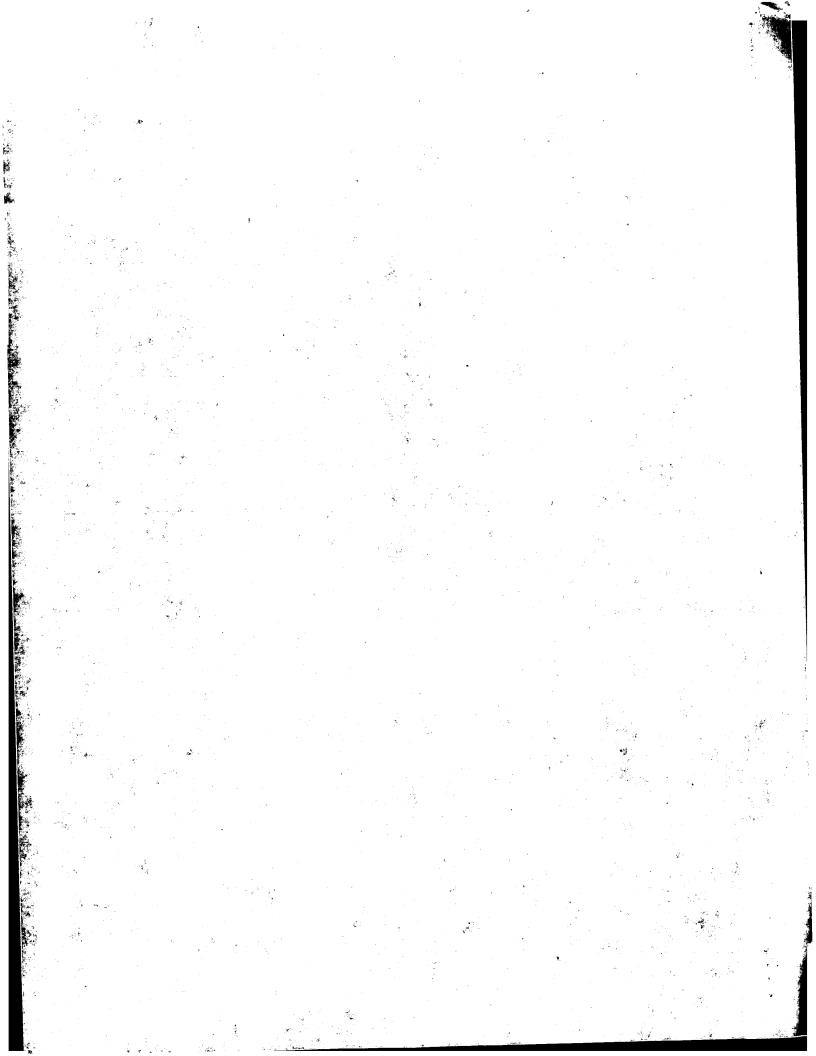

c Al-A2-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

c Ab. A12 and A1 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; main acide forms, all of which may contain a disulphide bond to give a cesterified forms, all of which may contain a disulphide bond to give a cysteine bridge, Peptides of this formula are designated protegrins and area of an animals. The protegrins confer resistance to microbial or viral infection in plants by preventing the growth of a virus or microbe or are particularly useful for the treatment of sexually transmitted are particularly useful for the treatment of sexually transmitted are particularly useful for the treatment of sexually transmitted are particularly useful for the treatment of sexually transmitted are particularly useful for the treatment of sexually transmitted are particularly useful for the sexually are form who are all the man all sexually are form also the area and an also and are accounted by microorganisms e.g. Candida albicans. Here they are also content and also an area content and a preservation and also area content and also and a preservation and also area content and also area conten
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      be used in eye care solutions and as preservatives for food. The protegrins are more effective under physiological conditions (e.g. in the presence of serum) than certain antibiotics and are non-toxic to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
